1	Introduction	1
1.1	Linear Time-Invariant Systems	1
1.2	Nonlinear Systems	3
1.3	Equilibrium Points	5
1.4	First-Order Autonomous Nonlinear Systems	5
1.5	Second-Order Systems: Phase-Plane Analysis	8
1.6	Phase-Plane Analysis of Linear Time-Invariant Systems	10
1.7	Phase-Plane Analysis of Nonlinear Systems	18
1.7.1	Limit Cycles	18
1.8	Higher-Order Systems	20
1.8.1	Chaos	21
1.9	Examples of Nonlinear Systems	22
1.9.1	Magnetic Suspension System	23
1.9.2	Inverted Pendulum on a Cart	25
1.9.3	The Ball-and-Beam System	26
1.10	Exercises	27
2	Mathematical Preliminaries	31
2.1	Sets	31
2.2	Metric Spaces	32

2.3	Vector Spaces	32
2.3.1	Linear Independence and Basis	34
2.3.2	Subspaces	36
2.3.3	Normed Vector Spaces	37
2.4	Matrices	39
2.4.1	Eigenvalues, Eigenvectors, and Diagonal Forms	40
2.4.2	Quadratic Forms	41
2.5	Basic Topology	44
2.5.1	Basic Topology in $\mathbb{R}^n$	44
2.6	Sequences	45
2.7	Functions	46
2.7.1	Bounded Linear Operators and Matrix Norms	48
2.8	Differentiability	49
2.8.1	Some Useful Theorems	51
2.9	Lipschitz Continuity	52
2.10	Contraction Mapping	54
2.11	Solution of Differential Equations	56
2.12	Exercises	59
3	Lyapunov Stability I: Autonomous Systems	65
3.1	Definitions	65
3.2	Positive Definite Functions	69
3.3	Stability Theorems	71
3.4	Examples	74
3.5	Asymptotic Stability in the Large	77
3.6	Positive Definite Functions Revisited	80
3.6.1	Exponential Stability	82
3.7	Construction of Lyapunov Functions	82

3.8	The Invariance Principle	85
3.9	Region of Attraction	93
3.10	Analysis of Linear Time-Invariant Systems	96
3.10.1	Linearization of Nonlinear Systems	99
3.11	Instability	100
3.12	Exercises	102
4	Lyapunov Stability II: Nonautonomous Systems	107
4.1	Definitions	107
4.2	Positive Definite Functions	110
4.2.1	Examples	111
4.3	Stability Theorems	113
4.4	Proof of the Stability Theorems	115
4.5	Analysis of Linear Time-Varying Systems	119
4.5.1	The Linearization Principle	120
4.6	Perturbation Analysis	122
4.7	Converse Theorems	125
4.8	Discrete-Time Systems	126
4.9	Discretization	127
4.10	Stability of Discrete-Time Systems	130
4.10.1	Definitions	130
4.10.2	Discrete-Time Positive Definite Functions	131
4.10.3	Stability Theorems	132
4.11	Exercises	133
5	Feedback Systems	137
5.1	Basic Feedback Stabilization	138
5.2	Integrator Backstepping	141
5.3	Backstepping: More General Cases	145

5.3.1	Chain of Integrators	145
5.3.2	Strict Feedback Systems	148
5.4	Example	151
5.5	Exercises	153
6	Input–Output Stability	155
6.1	Function Spaces	156
6.1.1	Extended Spaces	157
6.2	Input–Output Stability	159
6.3	Linear Time-Invariant Systems	164
6.4	$\mathcal{L}_p$ Gains for LTI Systems	166
6.4.1	$\mathcal{L}_\infty$ Gain	166
6.4.2	$\mathcal{L}_2$ Gain	167
6.5	Closed-Loop Input–Output Stability	168
6.6	The Small Gain Theorem	171
6.7	Loop Transformations	174
6.8	The Circle Criterion	178
6.9	Exercises	180
7	Input-to-State Stability	183
7.1	Motivation	183
7.2	Definitions	185
7.3	Input-to-State Stability (ISS) Theorems	186
7.3.1	Examples	189
7.4	Input-to-State Stability Revisited	191
7.5	Cascade-Connected Systems	195
7.6	Exercises	198
8	Passivity	201

8.1	Power and Energy: Passive Systems	201
8.2	Definitions	204
8.3	Interconnections of Passivity Systems	208
8.3.1	Passivity and Small Gain	210
8.4	Stability of Feedback Interconnections	211
8.5	Passivity of Linear Time-Invariant Systems	214
8.6	Strictly Positive Real Rational Functions	217
8.7	Exercises	220
9	Dissipativity	223
9.1	Dissipative Systems	224
9.2	Differentiable Storage Functions	225
9.2.1	Back to Input-to-State Stability	226
9.3	QSR Dissipativity	226
9.4	Examples	229
9.4.1	Mass-Spring System with Friction	229
9.4.2	Mass-Spring System without Friction	231
9.5	Available Storage	231
9.6	Algebraic Condition for Dissipativity	233
9.6.1	Special Cases	235
9.7	Stability of Dissipative Systems	237
9.8	Feedback Interconnections	239
9.9	Nonlinear $\mathcal{L}_2$ Gain	243
9.9.1	Linear Time-Invariant Systems	245
9.9.2	Strictly Output Passive Systems	246
9.10	Some Remarks about Control Design	247
9.11	Nonlinear $\mathcal{L}_2$ -Gain Control	251
9.12	Exercises	253

10 Feedback Linearization	255
10.1 Mathematical Tools	255
10.1.1 Lie Derivative	256
10.1.2 Lie Bracket	257
10.1.3 Diffeomorphism	259
10.1.4 Coordinate Transformations	259
10.1.5 Distributions	261
10.2 Input–State Linearization	265
10.2.1 Systems of the Form $\dot{x} = Ax + B\omega(x)[u - \phi(x)]$	265
10.2.2 Systems of the Form $\dot{x} = f(x) + g(x)u$	267
10.3 Examples	270
10.4 Conditions for Input–State Linearization	273
10.5 Input–Output Linearization	275
10.6 The Zero Dynamics	280
10.7 Conditions for Input–Output Linearization	287
10.8 Exercises	287
11 Nonlinear Observers	291
11.1 Observers for Linear Time-Invariant Systems	291
11.1.1 Observability	292
11.1.2 Observer Form	294
11.1.3 Observers for Linear Time-Invariant Systems	294
11.1.4 Separation Principle	295
11.2 Nonlinear Observability	296
11.2.1 Nonlinear Observers	298
11.3 Observers with Linear Error Dynamics	298
11.4 Lipschitz Systems	301
11.5 Nonlinear Separation Principle	303
